Experiment 06: Data Visualization Using Power BI

Name: AKHASH M

Register Number: 241501015

Department: AIML

Year / Semester: III / V

Aim

To learn the Power BI Desktop workflow by connecting to Excel, CSV or SQL data; creating bar, line and pie visualizations; using calculated fields and DAX measures; and assembling an interactive dashboard.

Procedure

1. Connect Power BI Desktop to the prepared dataset.
2. Check the imported fields and their data types.
3. Create the required category, region and summary visualizations.
4. Arrange the visuals into a dashboard and verify the filters.

This is a GUI-based experiment, so no Python code is required.

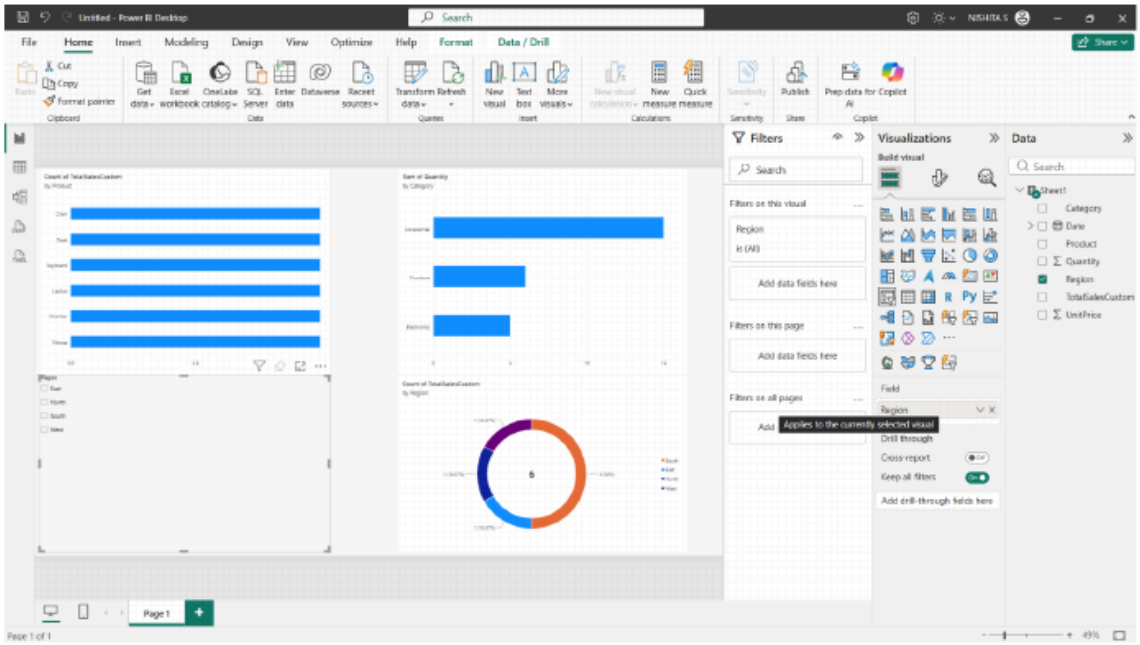

Executed Output

AIM:

To learn the Power BI Desktop interface and workflow by connecting to Excel/CSV/SQL data

sources, creating basic visualizations (bar, line, pie), writing calculated columns and measures

(DAX), and assembling an interactive dashboard that answers simple business questions.

RESULT:
Thus,the given program was written and executed sucessfully
