Experiment 07: Data Visualization Using Tableau

Name: AKHASH M

Register Number: 241501015

Department: AIML

Year / Semester: III / V

Aim

To understand the Tableau interface, connect to data sources, create charts, add calculated fields, and build an interactive dashboard and story.

Procedure

1. Connect Tableau to the prepared dataset.
2. Build sales-by-category, sales-trend, regional-sales and profit-ratio worksheets.
3. Add the worksheets to a dashboard and configure the region filter.
4. Verify the dashboard and worksheet results.

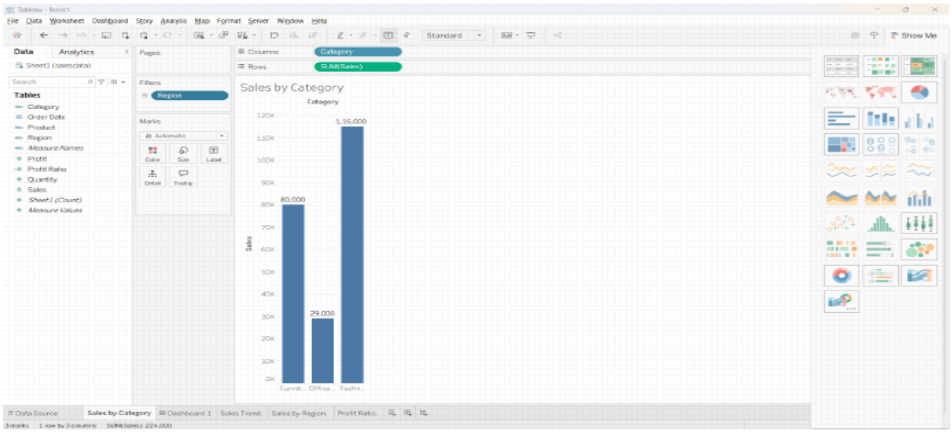

This is a GUI-based experiment, so no Python code is required.

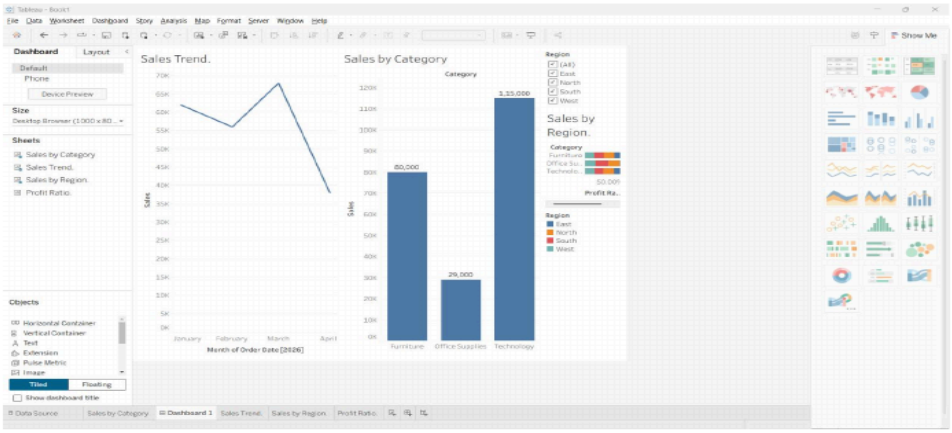

Executed Outputs

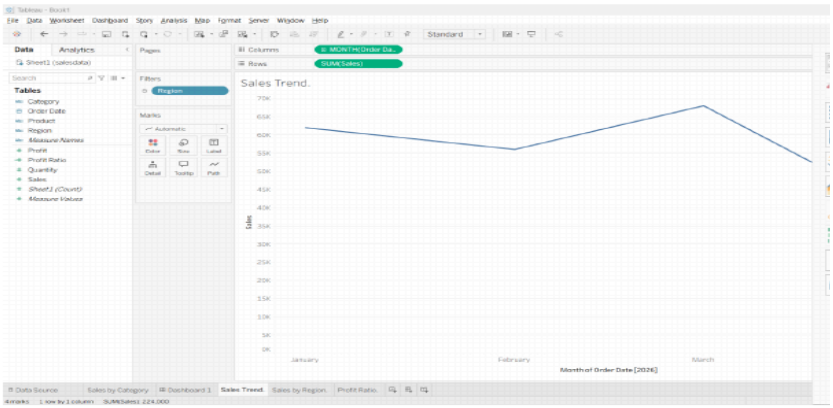

VII. Data Visualization Using Tableau

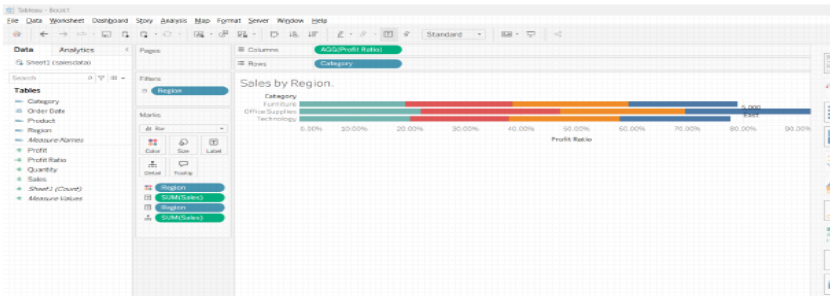

AIM:

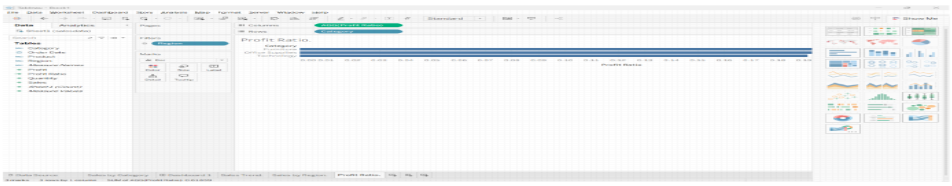

To understand the Tableau interface and perform data visualization by connecting to various data sources (Excel, CSV, SQL). The experiment includes creating basic visualizations (bar chart, line chart, pie chart), adding calculated fields, and building an interactive dashboard and story.

RESULT:
Thus, the given program was written and executed successfully.

Result

The Tableau worksheets and dashboard were created and executed successfully.
